Our purpose

Pioneering a
sustainable future
by turning waste
into value

Our foundation

VISION

We will become the most successful and respected green gas company in the world – acknowledged for our positive impact on the environment.

MISSION

We lead innovation, and efficient and safe operation, to improve the sustainable utilisation of organic waste.

CORE VALUES

- Partners are our first priority
- Together we can do more**
- Great ideas can come from everyone
- We get things done**
- We take the lead

Three questions to ask

FOOD WASTE FROM HOUSEHOLDS AND BUSINESSES

SLURRY

DEEP LITTER

Are there enough biomasses?

Can we compete on price?

Is electricity the answer to everything?

Nature Energy Korskro

Production: 1,274 million ft³ gas per year
Biomass capacity: 1.1 million Short tons per year

Today we operate 14 plants

 Operating plants

 Projects under construction

 Pipeline projects

Plants abroad

• The Netherlands - Green Gas Almere

Nature Energy is one of the **world's largest producers of biogas**. We produce the green gas by treating biowaste such as manure, foodwaste, and other biodegradable waste products at our biogas plants.

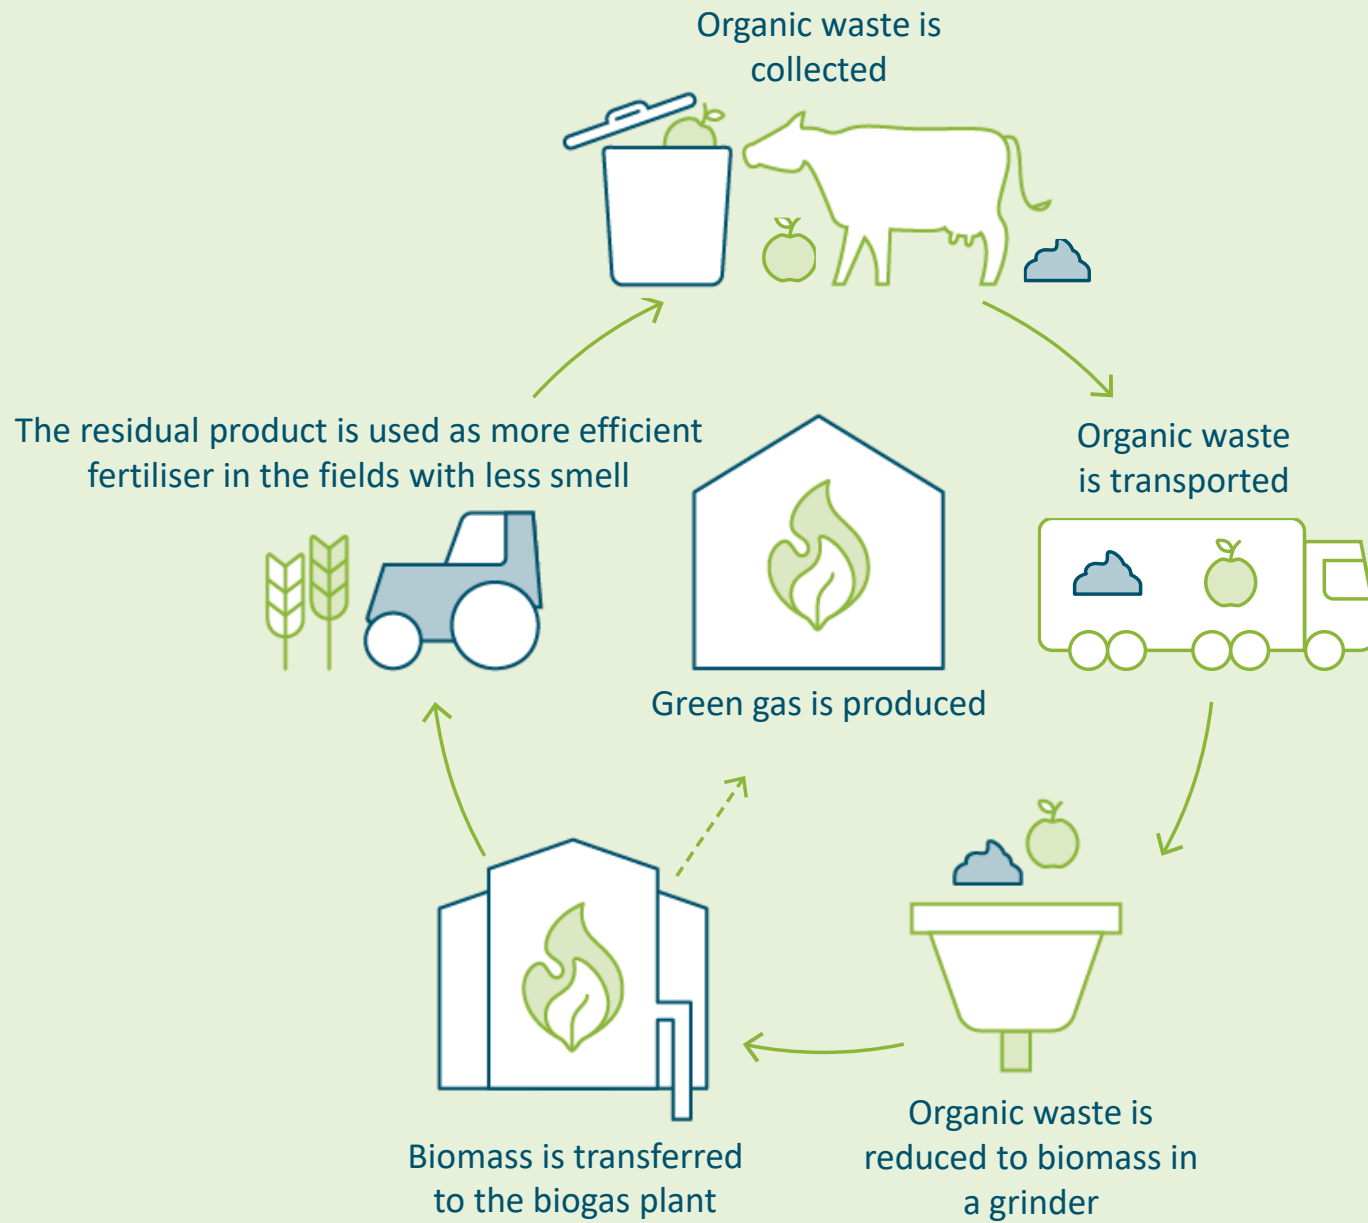

Nature Energy's first biogas plant was established in Holsted, Denmark, in 2015 and we now own and operate 13 plants in Denmark and one plant in the Netherlands.

In 2020 we turned **3.9m US tons of biowaste into 4.4 billion ft³ green biogas**, which corresponded to around **25 % of the total amount of green gas** in the Danish gas grid.

In 2021 we **increased the biogas production by a third**. This means that we provide the Danish gas grid with **30 % of the total amount of biogas**.

And the global potential is great

The biogas plant is a nutrient factory to farmers

Our biogas plants is an effective system for recycling of nutrients

A typical Nature Energy plant produces 0.7m US tons of nutrient rich green fertilizer

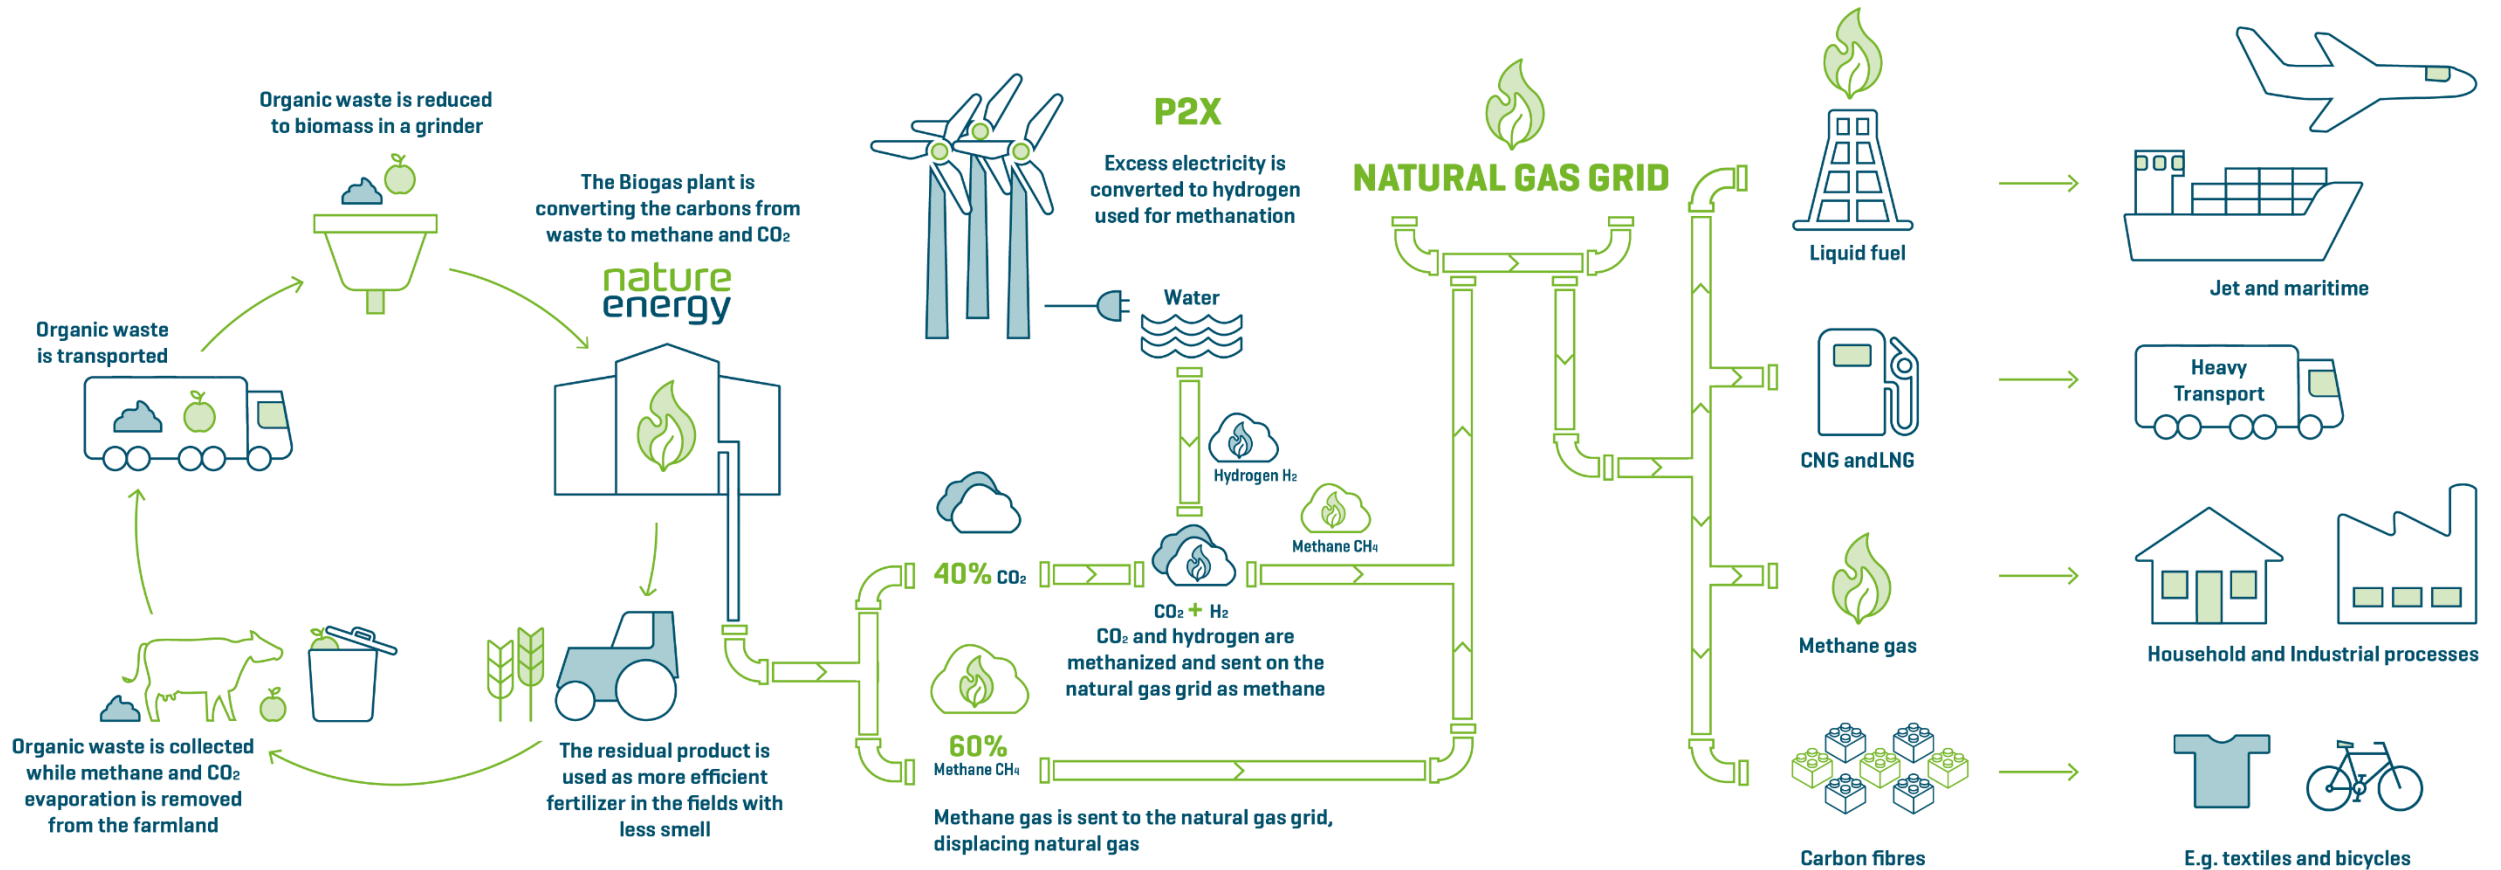

Saving costs on fertilizers and improving the environmental footprint of the farms

Cover-crops solutions

Circular economy

Applications for green CO₂

- One Nature Energy plant generates – on average – **25,000 US tons green CO₂ per year**
- Green CO₂ can be utilized for **refrigeration**, dry ice, beverages, food packaging, liquid fuel (P2X) or can be stored
- Green CO₂ can be used as a low carbon gas in the **food processing industry**
- Nature Energy's Korskro plants are already producing green CO₂ that is utilized in the food and beverage industry

Nature Energy owns/operates 20 CNG filling stations in Denmark

- Nature Energy is among **the world's leading producers of biogas** via large scale production
- This ensures **high quality** while production costs decrease
- Already in 2029 we **expect to halve the production cost** compared to 2019
- We look ahead to experiencing **the same development that wind energy underwent** where plants will be operated with less subsidies

Thank you for your time!

Get ready for the plant tour
