

Ørsted's carbon capture activities

I-Sustain US delegation
September 11, 2023

Martin Schroeder, Head of CCS Regulation
MARTS@orsted.com, +45 9955 8987

Ørsted develops energy systems that are green, independent and economically viable

■ Installed ■ Under construction

Offshore wind

- Global leader in offshore wind
- Develop, construct, operate and own offshore wind farms
- Ambition to reach ~30 GW installed capacity by 2030

Capacity, GW

Onshore renewables

- Strong presence in the United States and Europe
- Develop, operate and own onshore wind, solar PV and storage projects
- Ambition to reach ~17.5 GW installed capacity by 2030

Bioenergy & other

- Presence in Europe, including bioenergy plants, legacy gas activities and patented waste-to-energy technology
- Own and operate bioenergy and waste-to-energy plants, and optimise gas portfolio

Renewable hydrogen and green fuels

- Emerging platform with 10 pipeline projects (+3 GW) mainly in Europe
- Develop, construct, own and operate hydrogen facilities
- Ambition to become a global leader in renewable hydrogen and green fuels by 2030

Introduction to Ørsted Bioenergy and our future CCUS activities

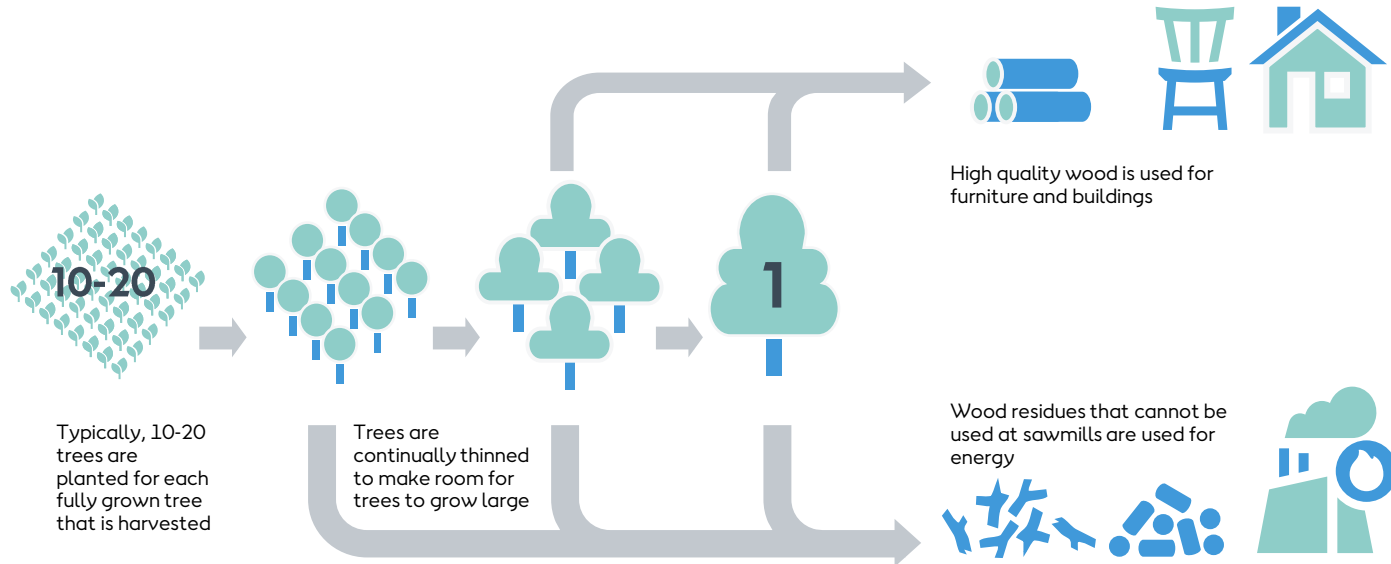

Fossil fuel phase out on Ørsted CHPs

How modern forestry works

Trees are thinned continually to create space for high quality wood

The Ørsted Kalundborg Hub

The Ørsted Kalundborg Hub establishes a key starting point for CO₂ infrastructure centrally in Denmark, capturing & storing 430.000 tons CO₂ / annually

Location of assets

Key facts on Ørsted Kalundborg Hub

Project Scope

- The **Ørsted Kalundborg Hub** is located in North West Zealand, and will have a central role in the import and export biogenic CO₂
- Project is based on a portfolio of two point sources to deliver the contracted **CO₂ quantity of 430,000 tons/annually**:
 1. Asnæs Power Plant, Unit 6 (ASV) with ~280,000 tons/annually
 2. Avedøre Power Plant, Unit 55 (AVV) with ~150,000 tons/annually
- Commencement of operations is December 1st, 2025. Construction to commence in June 2023
- The Project establishes **first-of-kind, large scale agreement** with Microsoft for the off take of carbon removal credits
- Subsidy contract with the Danish Energy Agency is for 20-year period

Technical Scope

- Key technology provider: **Aker Carbon Capture** will deliver five Just Catch™ units to the CHP plants. The Just Catch™ standardised concept is a modular and configurable technical solution
- Reliable and cost-effective **CO₂ streams from substantial biomass-fired** combined heat and power plants, ASV and AVV (wood chips and straw biomass)
- Transportation of CO₂ from AVV to ASV via truck. Truck solution offers cost and emission **efficient solution**, and **built-in flexibility** to change to pipeline
- Transport and permanent **offshore geological storage** of CO₂ is performed by Northern Lights

Ørsted's key partners in the Ørsted Kalundborg Hub project

Description

The solution is based on a concept with the two point sources:

- (1) Asnæsværket unit 6 (ASV6)
- (2) Avedøreværket, unit 55 Straw Boiler

CO₂ is captured from five carbon capture modules (3) before it is liquefied by compression and cooling (4). The liquid CO₂ streams are joined in the shared intermediate storage and shipping terminal, awaiting transport (5)

Transportation of captured CO₂ from AVV to ASV via truck (6)
At ASV terminal the CO₂ is loaded to intermediate storage tanks (7)

Transport is performed by ship (8), at a rate consistent to the operation of the two CC units. Liquid CO₂ is delivered to onshore intermediate storage terminal (9) ahead of transfer and injection into offshore permanent geological reservoir (10) 2,600 m

Negative emission credits (11) from BECCS at ASV and AVV can be sold through bilateral offtake agreements and commodity trading platforms

The CO₂ will be safely and permanently stored 2,600 metres under the seabed in the North Sea, where it will be continuously monitored to ensure it remains secure

KEY FACTS

- **Operator:** Northern Lights JV
- **Location onshore terminal:** Øy garden, west coast of Norway
- **Location geological storage:** 100 km offshore, 2.6 km below seabed
- **Start of operations:** 2024 (Ørsted volumes in 2025)
- **The storage complex:** "Aurora" is part of the Exploitation License, EL001, which was awarded in January 2019

The world's first cross-border, open access CO₂ transport and storage network

Northern Lights has an ambition to expand capacity to a total of 5 million tonnes per year

- ➔ Northern Lights is the transport and storage component of the Norwegian Government's full-scale carbon capture and storage project, *Longship project*
- ➔ Norway has safely stored CO₂ deep in the North Sea for over two decades
- ➔ CO₂ is injected as a liquid into a sandstone reservoir. Here the CO₂ is trapped in rock pores and will dissolve and mineralize over time
- ➔ Extensive facility and subsurface monitoring of the CO₂ during injection period and post-injection period will ensure the CO₂ is conformed and contained

Let's create a world
that runs entirely on
green energy
